

# Spaceport America Cup

## Intercollegiate Rocket Engineering Competition Rules & Requirements Document

## Revision History

| REVISION          | DESCRIPTION  | DATE       |
|-------------------|--|------------|
| 2023<br>Version 1 | <ol style="list-style-type: none"> <li>1. Baseline for 2022 – changes from the previous version below</li> <li>2. Added reference to Tripoli Safety Code in Chapter 2</li> <li>3. Added new paragraph 2.2.3 describing the evaluation criteria for team entries</li> <li>4. Added new paragraph 2.2.4 clarifying policy on teams with students from multiple institutions</li> <li>5. Clarified payload weigh-in requirements in 2.3.3</li> <li>6. Added clarification in 2.3.5.2 and 2.7.1.7 on requirements to get the CubeSat payload bonus.</li> <li>7. Added clarification to 2.5 procedure</li> <li>8. Added new paragraphs in 2.6.1 describing safety reviews for progress reports and adding an online safety review as the 3<sup>rd</sup> progress update.</li> <li>9. Added wording in 2.6.2 allowing teams to use LaTeX to prepare the Project Technical Report</li> <li>10. Re-added page limits in 2.6.2</li> <li>11. Added clarification of expectations for the System Architecture Review in 2.6.2.3</li> <li>12. Added specific requirements for the Weights and Measures appendix in 2.6.2.6</li> <li>13. Added testing requirements in 2.6.2.7 to comply with DTEG</li> <li>14. Added requirement in 2.6.2.10 for off-nominal procedures and for hybrid or liquid teams to have fill/vent/fault checklists</li> <li>15. Told teams to not embed full CAD models into their files in 2.6.2.11</li> <li>16. Added new language in 2.6.4 reiterating that Podium Session topics are limited to launch-vehicle-related items and specifically that payloads are not eligible for Podium Sessions.</li> <li>17. Added new paragraph 2.6.5 which includes the requirement to meet timelines in the Integrated Master Schedule (IMS)</li> <li>18. Remainder of section 2.6 renumbered accordingly</li> <li>19. Revised 2.6.6.2 to clarify requirements for insurance and gave a deadline for teams not flying under TRA rules</li> <li>20. Updated turn-in requirements for entry and progress updates in 2.7.1.1</li> <li>21. Updated 2.7.1.4 to match “excessive damage” definition.</li> <li>22. Extensive rework of judging criteria and rubrics in 2.8, rubrics moved to Appendix B</li> <li>23. Matched “excessive damage” definition in 2.8.1.4 to the DTEG, Appendix A. This includes provision for components designed to be rapidly replaced</li> <li>24. Removed unused acronyms from Appendix A</li> <li>25. Minor edits and format changes</li> </ol> | 12/02/2022 |
| Version<br>1.1    | <ol style="list-style-type: none"> <li>1. Added Creative Commons V4 licensing</li> <li>2. Added scoring rubric for Podium Presentations in Appendix B</li> </ol>   | 04/22/2023 |

| REVISION       | DESCRIPTION  | DATE       |
|----------------|--|------------|
| Version<br>1.2 | <ol style="list-style-type: none"> <li>1. Corrected section references throughout</li> <li>2. Corrected web link for Spaceport America Cup Waiver and Release of Liability Form</li> </ol>   | 04/29/2023 |
| Version<br>1.3 | <ol style="list-style-type: none"> <li>1. Section 2.1<br/>Removal of Tripoli Range safety rules statement</li> <li>2. Section 2.2.2<br/>University limit note removed</li> <li>3. Section 2.2.3<br/>Clarification of optionality</li> <li>4. Section 2.3.1<br/>Added statement of required payload stability</li> <li>5. Section 2.3.3<br/>Added statement of required payload stability</li> <li>6. Section 2.3.4<br/>Added statement of approval prior to event</li> <li>7. Section 2.5<br/>Penalty wording clarification</li> <li>8. Section 2.6.2<br/>Addition of note for sample reports</li> <li>9. Section 2.6.2.1<br/>Dead weight wording clarification</li> <li>10. Section 2.6.2.10<br/>Paper hard copy requirement clarification</li> <li>11. Section 2.6.2.11<br/>Drawing submission wording clarification</li> <li>12. Section 2.6.3<br/>Energetics at conference requirements addition</li> <li>13. Section 2.6.6.2<br/>Insurance optionality clarification</li> <li>14. Section 2.7.1.8<br/>Efficient launch preparations rules changes</li> <li>15. Section 2.8<br/>Reduction of acceptable safety or unsportsmanlike conduct infractions</li> </ol> | 10/1/2023  |

| REVISION       | DESCRIPTION   | DATE       |
|----------------|---|------------|
| Version<br>1.4 | <ol style="list-style-type: none"> <li>1. Updated 1.0 for contacting ESRA via HeroX.</li> <li>2. Added links for SAC Video &amp; Live Video Challenge in 1.1</li> <li>3. Updated 2.1 for clarity</li> <li>4. Updated 2.3.1 for clarity</li> <li>5. Clarified the host of the Payload Challenge in 2.3.2</li> <li>6. Corrected typo in 2.3.3</li> <li>7. Clarified the meaning of “significant” in 2.3.4</li> <li>8. Updated and clarified “Payload Cube Unit” to replace CubeSat and added Table 1 dimensions in 2.3.5</li> <li>9. Updated “Payload Cube Unit” to replace CubeSat in 2.3.5.1</li> <li>10. Clarified the allowed max non-functional weight and removed CubeSat terminology in 2.3.5.2</li> <li>11. Added new Section 2.3.5.3 on Deployable Payloads</li> <li>12. Added new Section 2.3.5.4 for Technology Demonstration Flight Airspace</li> <li>13. Added cutoff times for Postflight Inspection in 2.5</li> <li>14. Clarified requirement for project deliverables in 2.6</li> <li>15. Added guidance in 2.6.1</li> <li>16. Added guidance in 2.6.1.1</li> <li>17. Clarified AIAA style guide and added link to it in 2.6.2</li> <li>18. Corrected section callout in 2.6.2.4</li> <li>19. Added deadline for Poster session material and clarified “energetics” in 2.6.3</li> <li>20. Corrected typo in 2.6.4</li> <li>21. Added references to 2.6.5</li> <li>22. Removed quotations around Place in 2.7.1</li> <li>23. Added procedure for withdrawing in 2.7.1.1 and 2.7.1.2</li> <li>24. Updated 2.7.4 for clarity</li> <li>25. Clarified Sportsmanship points in 2.7.1.4</li> <li>26. Clarified Efficient Launch Bonus requirement in 2.7.1.8</li> <li>27. Added new section 2.7.4.3 for Team Video Challenge Awards</li> <li>28. Added new section 2.7.4.4 for Live Rocket Video Challenge Awards</li> <li>29. Added consequences for late or not paying fees in 2.9.1</li> <li>30. Updated 3.0 for clarity</li> <li>31. Added IMS to Appendix A</li> <li>32. Reformatted rubrics in Appendix B</li> </ol> | 03/04/2024 |

## 1.0 PURPOSE AND SCOPE

This document defines the rules and requirements governing participation in the IREC. Additional guidance for collegiate teams entered in the IREC is contained in the *IREC Design, Test, & Evaluation Guide (DTEG)*, maintained on the ESRA website. The DTEG provides teams with project development guidance ESRA uses to promote flight safety. Departures from this guidance may negatively impact an offending team's score and flight status depending on the degree of severity.

Additional requirements for project deliverables can be found in the Integrated Master Schedule document, which is available on the ESRA website.

If any IREC team is unclear about competition rules and requirements, the spirit and intent of the rules or has a situation not specifically addressed by this document, they should contact ESRA via the HeroX forums.

## 1.1 DOCUMENTATION

The following documents include standards, guidelines, schedules, or required forms. The documents listed in this section are either applicable to the extent specified herein or contain reference information useful in the application of this document.

## 2.0 INTERCOLLEGIATE ROCKET ENGINEERING COMPETITION OVERVIEW

Student teams competing in the IREC must design, build, and launch a rocket carrying a payload of no less than 8.8 lbs. to a target apogee of either 10,000 ft or 30,000 ft above ground level (AGL). Team Projects will be divided into one of the following six categories based on the type of project attempted. Teams are permitted to switch categories if required, prior to submitting their final Project Technical Report.

- 10,000 ft AGL apogee with commercial-off-the-shelf (COTS) solid or hybrid rocket propulsion system
- 30,000 ft AGL apogee with COTS solid or hybrid propulsion system
- 10,000 ft AGL apogee with student researched and developed (SRAD) solid rocket propulsion system.
- 30,000 ft AGL apogee with SRAD solid rocket propulsion system
- 10,000 ft AGL apogee with SRAD hybrid or liquid rocket propulsion system
- 30,000 ft AGL apogee with SRAD hybrid or liquid rocket propulsion system

## 2.1 GENERAL GUIDELINES FOR DESIGN AND FLIGHT OPERATIONS

SRAD propulsion systems are defined as those designed by and manufactured by students. However, due to constraints such as budget, lack of technical skills, tooling or financial, student teams may work with third parties to assist in manufacturing of some components. Under no circumstances are the SRAD propellant components to be manufactured by a third party. This includes solid propellant grains.

Multistage launch vehicles and all chemical propulsion disciplines (solid, liquid, and hybrid) are allowed.

Note that all propellants used must be non-toxic. Ammonium perchlorate composite propellant (APCP), potassium nitrate and sugar (aka "rocket candy"), nitrous oxide, liquid oxygen (LOX), hydrogen peroxide, kerosene, propane, and similar substances, are all considered non-toxic. Toxic propellants are defined as those requiring breathing apparatus, special storage and transport infrastructure, extensive personal protective equipment, etc. (e.g., Hydrazine and  $N_2O_4$ ).

ESRA uses the DTEG to define and promote flight safety. The IREC utilizes national standards including NFPA 1127, FAA and other regulatory organizations. The requirements are specifically listed in the DTEG. Departures from the DTEG may negatively impact an offending team's score and flight status, depending on the degree of severity.

Competition Officials will evaluate competitors for Awards within each competition category based on the quality of required project documentation, a Poster Session held during the SA Cup Conference, the quality of their system's overall design and construction, and finally the program's overall operational efficiency and performance demonstrated at the SA Cup. Furthermore, Competition Officials will select no less than 24 teams to present a particular aspect of their work

in a Podium Session held during the SA Cup Conference. These teams are eligible to receive certain Technical Achievement Awards.

## **2.2 TEAM COMPOSITION AND ELIGIBILITY**

### **2.2.1 STUDENT TEAM MEMBERS**

IREC Teams shall consist of members who were matriculated undergraduate or graduate students (i.e., Masters or Doctoral students) during the previous academic year (e.g., former students who graduated shortly before the competition remain eligible) from a single academic institutions (e.g., "joint teams" are ineligible). Exceptions can be made (see 2.2.4).

There is no limit on the overall number of students per team, or on the number of graduate students per team. Individual students may only compete on a single team.

### **2.2.2 TEAM ORGANIZATION AND SUBMISSION LIMITATIONS**

Each team shall submit no more than one project into the IREC. Furthermore, no project may be entered in more than one category at the IREC. Although, as previously noted, teams are permitted to downgrade to 10k COTS as necessary prior to submitting their final Project Technical Report. The event organizers will track and evaluate each team separately, regardless of common student membership or academic affiliation.

### **2.2.3 EVALUATION OF TEAM ENTRIES**

Acceptance into the Spaceport America Cup is highly selective. Teams are strongly encouraged to participate with local rocketry programs to gain high power rocketry flight experience prior to the competition launch days. Teams with SRAD, hybrid, or liquid projects should have experience relevant to their project (ex: minimum of a static, full-scale hotfire). Teams are also encouraged to have an experienced mentor and flyer of record. Competition officials will evaluate the overall quality of the team's application, relevant experience team outreach efforts, along with previous Cup experience to determine which teams will be accepted.

### **2.2.4 TEAM COMPOSITION AND MULTI-SCHOOL TEAMS**

In general, the intent is that competing teams should represent one institution. However, in circumstances where there are not enough capable students at a given institution to form a team, a team can be formed using students from more than one institution. If an institution fields a team, students from that institution cannot join another team. Teams will document their institutional affiliation(s) via the School Participation Letter(s) specified in 2.6.6.1

## **2.3 PAYLOAD**

### **2.3.1 PAYLOAD MASS**

The launch vehicle shall carry no less than 8.8 lbs. of payload. Payload is defined as being replaceable with ballast of the same mass, with no change to the launch vehicle's trajectory in reaching the target apogee, or its successful recovery. This payload may be assumed present when

calculating the launch vehicle's stability. There is no requirement for launch vehicles to be stable without the required payload mass on-board.

Competition officials will “weigh” the launch vehicle’s payload(s) at the Spaceport America Cup with a scale they provide. Understanding there may be discrepancies between a team’s own scale and the official one used for weigh-in, competition officials will accept payload weigh-ins as much as 5% (~0.4 lb.) less than the specified minimum without penalty. For example, competition officials will not penalize a team whose payload measured 8.8 lbs. on the team’s own scale but 8.4 lbs. on the officials’ scale. Any weight greater than the specified minimum is acceptable. Vehicle payloads must themselves be mechanically robust and not be damaged or shifted in any phase of flight or during recovery. Poorly designed payload may cause a loss of payload score at judge’s discretion as described in section 2.7.1.6.

### **2.3.2 INDEPENDENT PAYLOAD FUNCTIONALITY**

Although non-functional "boiler-plate" payloads are permitted, teams are highly encouraged to launch creative scientific experiments and technology demonstrations. However, launch vehicles shall be designed to deliver the payload to the target apogee and recover themselves independent of any active or passive payload function(s). For example, an active launch vehicle stability augmentation system is a launch vehicle subsystem – not a payload. Such launch vehicle subsystems will contribute to competition officials’ overall evaluation of a project and may be submitted to the SA Cup Conference Podium Session described in Section 2.6.4 of this document, but they are not payloads.

Scientific experiments and technology demonstration payloads entered in the IREC may be evaluated for awards. Representatives from the Space Dynamics Laboratory (SDL) host the SDL Payload Challenge – an Intercollegiate Payload Engineering Competition hosted at the Spaceport America Cup. Teams wishing to enter their payload(s) into the SDL Payload Challenge should consult the SDL Payload Challenge Page on the ESRA website.

<http://www.soundingrocket.org/sdl-payload-challenge.html>).

### **2.3.3 PAYLOAD LOCATION AND INTERFACE**

Neither the payload's location in the launch vehicle nor its method of integration and removal is specified; however, competition officials will weigh payload(s) independent of all launch vehicle associated systems prior to flight. Therefore, the payload(s) submitted for weigh-in shall not be inextricably connected to other launch vehicle associated components (e.g., the launch vehicle's recovery system, internal structure, or airframe) while being weighed. If the payload's design prevents it from being weighed completely independent of the launch vehicle or interface with the launch vehicle (e.g., an adapter to mate the payload to the rocket), competition officials will impose a point penalty on the team in accordance with Section 2.7.1.6 of this document. Judges will also verify the payload’s capability to withstand launch and recovery loads. Teams with payloads that

are not properly secured may shift in flight and will be denied launch access until the payload is properly secured.

### 2.3.4 RESTRICTED PAYLOAD MATERIALS

Payloads shall not contain significant quantities of lead or other heavy metals. Additionally, payload shall not contain any hazardous materials that impact the health and safety of team members, staff, the general public, the convention center, or the launch site itself. Similarly, any use of radioactive materials shall be permitted only if operationally necessary and approved by competition officials. If approved, any such materials shall be fully encapsulated and are limited to 1  $\mu$ C or less of activity. Finally, payloads shall not contain any live, vertebrate animals. Approvals shall be gained prior to attending the event and will not be granted on site. If teams have any questions about payload materials, they should seek clarification on HeroX as early as possible.

### 2.3.5 PAYLOAD FORM FACTOR

The following sections concern the required shape and dimensions of payload(s) submitted for weigh-in. These requirements are different if the payload is a non-functional “boiler-plate” (aka mass emulator) or if it is a functional scientific experiment/technology demonstration (i.e., those entered in the SDL Payload Challenge). Section 2.3.5.1 defines the requirements for non-functional payloads. Section 2.3.5.2 defines the requirements for functional payloads. ESRA’s “Payload Cube Unit” is defined in Table 1 below. This definition applies throughout this document. The definition is inspired by the CubeSat standard but is not identical to it.

*Table 1: Payload Form Factor Definitions*

| Payload Cube Units | Dimensions (Length x Width x Height) | Length and Width Tolerance | Height Tolerance |
|--------------------|--------------------------------------|----------------------------|------------------|
| 1U                 | 100 mm x100 mm x100 mm               | $\pm 2$ mm                 | $\pm 2$ mm       |
| 2U                 | 100 mm x100 mm x200 mm               | $\pm 2$ mm                 | $\pm 2$ mm       |
| 3U                 | 100 mm x100 mm x300 mm               | $\pm 2$ mm                 | $\pm 2$ mm       |
| 4U                 | 100 mm x100 mm x400 mm               | $\pm 2$ mm                 | $\pm 2$ mm       |

#### 2.3.5.1 NON-FUNCTIONAL PAYLOAD

Any launch vehicle carrying strictly non-functional payload mass (ie. ballast weight), as it’s payload shall do so in the form of one or more “Payload Cube Units”, listed in table 1 of this document.

#### 2.3.5.2 SCIENTIFIC EXPERIMENT OR TECHNOLOGY DEMONSTRATION PAYLOAD

Any functional scientific experiment or technology demonstration payload and its associated structure (i.e. those entered in the SDL Payload Challenge) may be constructed in any form factor, provided the experiment/technology and its associated structure remain in compliance with

Sections 2.3.1, 2.3.2, 2.3.3, and 2.3.4 of this document. With special regard to compliance with Section 2.3.1, the required minimum payload mass should be achieved primarily by the experiment(s)/technology and associated support structure. The payload design may incorporate up to 2.25 lbs. of non-functional “boiler-plate” mass to meet the required mass minimum while remaining exempt from Section 2.3.5.1 above. This non-functional “boiler-plate mass must be weighed separately from the rest of the payload to ensure it does not exceed the allowed mass as specified above. Competition officials may impose a point penalty on any team believed to be violating the spirit and intent of this rule in accordance with Section 2.7.1.6 of this document.

Finally, despite this exemption, ESRA highly encourage teams to adopt the Payload Cube Unit physical standard for their payload(s) whenever possible – either as the payload structure itself, or as an adapter which the payload is mated to prior to the combined assembly’s integration with the launch vehicle (such an adapter could be included in the official payload mass). To promote this encouragement, teams whose functional payloads do adopt the Payload Cube Unit physical standard will be awarded bonus points in the IREC in accordance with Section 2.7.1.7. To meet this requirement, a payload will have to fit completely in a Payload Cube Unit dispenser with nothing protruding or physically connecting outside as listed in the Table 1 of Section 2.3.5.

### **2.3.5.3 DEPLOYABLE PAYLOADS**

Deployable Payloads that eject a payload out during the flight and or eject once they have landed with the rest of the rocket are allowed. Teams are advised to evaluate their designs as deployable payloads will bring a significant risk and level of scrutiny to that team’s project by competition officials.

### **2.3.5.4 TECHNOLOGY DEMONSTRATION FLIGHT AIRSPACE**

Any team entering a rocket as a high-altitude demonstration flight (that may require a Class 3 waiver) shall coordinate with ESRA officials to ensure the team secures the needed airspace permissions.

## **2.4 GPS ROCKET TRACKING**

All Spaceport America Cup launch vehicles shall carry a Global Position System (GPS) tracking system to expedite rocket recovery. GPS Tracking requirements are described in detail within the IREC Design, Test, and Evaluation Guide (DTEG), maintained on the ESRA website: (<http://www.soundingrocket.org/sa-cup-documents--forms.html>).

## **2.5 OFFICIAL ALTITUDE LOGGING**

Launch vehicles shall carry a COTS barometric pressure altimeter with on-board data storage, which will provide an official log of apogee for scoring. This may either be a standalone COTS product, or a feature of a COTS flight computer also used for launch vehicle recovery system deployment.

While the on-board log is considered the primary data source for official altitude reporting, telemetry – if implemented – may be accepted under certain circumstances defined in Section 2.7.1.4 of this document. If implemented, this telemetry data shall originate from the same sensor source as the official on-board data log.

All rocket recovery teams must report directly to the Postflight Inspection tent once they return with their rocket, along with any required equipment (e.g., laptop and cables) to read the altimeter data to the Postflight Inspection team. The Postflight Inspection team will first listen to the beeps from the altimeter and then verify using the altimeter readout of the flight data. Altitude data is critical to providing a final score for your team. Teams are required to report directly for Postflight Data Inspection on the day that the team launches to be eligible for the entire altitude score. The cutoff check-in time for teams with their rocket at Postflight Data Inspection during Wednesday-Friday is 19:00 Mountain Time. For Saturday, the cutoff check-in time for this inspection is 11:00 Mountain Time. Failure to report directly for the Postflight Inspection could cause your team to be penalized up to and including a zero-flight altitude score.

## **2.6 PROJECT DELIVERABLES**

The following sections define the deliverable materials (e.g., paperwork and presentation materials) competition officials require from teams competing in the IREC – including as appropriate each deliverable's format and minimum expected content. All deliverables will be submitted to ESRA per the instructions provided to the teams. Each relevant deliverable description will facilitate submission of that deliverable or will be communicated to teams as is determined by ESRA. Any late, incomplete, or incorrect submissions, including progress updates, will result in a loss of points in accordance with paragraph 2.7.1.1. Submissions are incorrect if data is incorrect, entered the wrong fields or not entered in accordance with submission guidance. This too includes entering units when only numerical data is requested.

The scheduled due dates of all required deliverables are recorded in the *Spaceport America Cup Integrated Master Schedule Document*, maintained on the ESRA website (<http://www.soundingrocket.org/sa-cup-documents--forms.html>).

### **2.6.1 ENTRY FORM AND PROGRESS UPDATES**

Each team shall inform ESRA of their desire to compete in the IREC by registering as a new team on the Spaceport America Cup HeroX website: (<https://www.herox.com/SpaceportAmericaCup2024>). Teams shall submit progress updates via the HeroX site on three specific occasions prior to the competition. The third progress will include a live video review to be held online. These progress updates will record progression in the project's technical characteristics during development. Competition officials understand not all technical details will be known until later in the design process. Therefore, the Entry Form and all subsequent Progress Updates prior to the final submission will be evaluated based only on their timeliness and completeness. Timeliness and completeness are defined as follows:

Total completeness of the entry form and subsequent updates is always required. Reasonable engineering estimates and approximations are expected during the application process but will be subject to progressive additional scrutiny in the subsequent Progress Updates. Teams should briefly mention their ongoing discussions and analysis in the comment fields for any numerical submissions that are known to be unreasonable or remain undecided. Teams may also respond to undecided criteria by demonstrating their understanding of any applicable event guidance or best practice governing the particular detail. In general, ESRA expects technical information to change, but information must always be provided. Only teams whose application meets this standard will be evaluated for entry into the competition. Accepted teams will be announced per the Master Schedule and each accepted team will receive a Team ID. Once assigned, any correspondence between a team and ESRA must contain that team's ID number to enable a timely and accurate response.

### **2.6.1.1 ONLINE PROGRESS UPDATE AND SAFETY REVIEW**

For the 3<sup>rd</sup> progress update, teams will submit information on HeroX and discuss their rocket in an online session with safety reviewers. Specific instructions will be forthcoming, but teams should expect to create a short slide presentation reviewing their current progress and to discuss issues previously raised by the safety reviewers. Teams shall have their rocket available for review (realizing that the build should be mostly complete by this point in the competition). Teams are responsible for coordinating and providing meeting link to this online safety review with their established Flight Safety Reviewer(s), Flyer of Record and Mentor, which must be recorded and sent to ESRA to be uploaded onto their social media platforms.

Note: Teams who have significant production work remaining by the 3<sup>rd</sup> progress update may be disqualified.

### **2.6.1.2 INITIAL SAFETY REVIEWS**

Each progress update will be reviewed for safety, DTEG, and rules compliance. Safety reviewers will contact teams if necessary to resolve any issues or questions. Teams that are unable to satisfactorily resolve safety-related issues may be disqualified.

Note: these online safety reviews are not a substitute for the “hands-on” safety review and RSO process conducted during the actual competition.

## **2.6.2 PROJECT TECHNICAL REPORT**

Each team shall submit a Project Technical Report which overviews their project for the judging panel and other competition officials. The Project Technical Report shall be formatted similarly to the template provided below and shall use the American Institute of Aeronautics and Astronautics (AIAA) style guide, found on the AIAA website.

<https://www.aiaa.org/publications/journals/Journal-Author/punctuation-spelling-and-style>

The *Intercollegiate Rocket Engineering Competition Project Technical Report* template is available for download on the ESRA website (<http://www.soundingrocket.org/sa-cup-documents-forms.html>). Always check the template maintained on the ESRA website before drafting your Project Technical Report to ensure you are using the latest version.

Teams are permitted to use other document preparation software, such as LaTeX, to prepare their Project Technical Report, but they must ensure that formatting is identical to the ESRA template.

For COTS teams, the main body of the technical report is limited to 25 pages. For SRAD and Hybrid/Liquid teams, the main body of the technical report is limited to 50 pages. The main body page limit is for text only and does not include graphics. Appendices may be of any length.

In accordance with the IMS dates, teams shall submit a single digital PDF copy of their Project Technical Report. Technical reports exceeding 50 Megabytes in size may need to be uploaded to a cloud server if the permissions allow the judges unrestricted access to the document. Teams shall submit their Project Technical reports using the HeroX website (<https://www.herox.com/SpaceportAmericaCup2024>). Teams should bring a limited number of hard copies to the Spaceport America Cup so members of the judging panel and other competition officials may consult the contents at will during interactions with the team.

The Project Technical Report's main title page is left to the team's discretion, however; the paper shall be subtitled "Team <Your Team ID> Project Technical Report to the <Year> Spaceport America Cup". For example, a team assigned the Team ID "42", competing in the 2024 IREC, would subtitle their Project Technical Report "Team 42 Project Technical Report to the 2024 Spaceport America Cup".

Note: In response to multiple team requests for sample reports, all report submissions will be eligible for selection to share openly with all teams on the ESRA website after the competition is complete. If your team does not wish to have their reports shared, please add a large bold "do not share" statement to the title page. Report submission without this statement signifies that your team approves sharing.

### **2.6.2.1 ABSTRACT**

The Project Technical Report shall contain an Abstract. At a minimum, the abstract shall identify the launch vehicle's mission/category in which the team is competing, identify any unique/defining design characteristics of launch vehicle, define the payload's mission even if it's only dead weight, and provide whatever additional information may be necessary to convey any other high-level project or program goals & objectives.

### **2.6.2.2 INTRODUCTION**

The Project Technical Report shall contain an Introduction. This section provides an overview of the academic program, stakeholders, team structure, and team management strategies. The

introduction may repeat some of the content included in the abstract, because the abstract is intended to act as a standalone synopsis if necessary.

### **2.6.2.3 SYSTEM ARCHITECTURE OVERVIEW**

The Project Technical Report shall contain a System Architecture overview. This section shall begin with a top-level overview of the integrated system, including a cutaway figure depicting the fully integrated launch vehicle and its major subsystems – configured for the mission being flown in the competition. This description shall be followed by the following subsections. Each subsection shall include detailed descriptions of each subsystem, and reflect the technical analyses used to support design and manufacturing decisions. The Project Technical Report should not just discuss what the team did, but the reasoning for their choices. These may include, but are not limited to, design goals, limitations, potential trade-offs, anticipated component loads along with safety factors. Technical drawings of these subsystems should be included in the specified appendix.

- Propulsion Subsystems
- Aero-structures Subsystems
- Recovery Subsystems
- Payload Subsystems

### **2.6.2.4 MISSION CONCEPT OF OPERATIONS OVERVIEW**

The Project Technical Report shall contain a Mission Concept of Operations (CONOPS) Overview. This section shall identify the mission phases, include a figure, and describe the nominal operation of all subsystems during each phase (e.g., a description of what is supposed to be occurring in each phase, and what subsystem[s] are responsible for accomplishing this). Furthermore, this section shall define what mission events signify a phase transition has occurred (e.g., "Ignition" may begin when a FIRE signal is sent to the igniter and conclude when the propulsion system comes up to chamber pressure. Similarly, "Liftoff" may begin at vehicle first motion, and conclude when the vehicle is free of the launch rail). Phases and phase transitions are expected to vary from system to system based on specific design implementations and mission goals & objectives. No matter how a team defines these mission phases and phase transitions, they will be used to help organize failure modes identified in a Risk Assessment Appendix – described in Section 2.6.2.9 of this document.

### **2.6.2.5 CONCLUSIONS AND LESSONS LEARNED**

The Project Technical Report shall contain Conclusions and Lessons Learned. This section shall include the lessons learned during the design, manufacture, and testing of the project, both from a team management and technical development perspective. If you had failures, what did you learn from them? Furthermore, this section should include strategies for corporate knowledge transfer from senior student team members to the rising underclassmen who will soon take their place.

### **2.6.2.6 SYSTEM WEIGHTS, MEASURES, AND PERFORMANCE DATA APPENDIX**

The first Project Technical Report appendix shall contain System Weights, Measures, and Performance Data. All information will be reported using Imperial units (inches, feet, pounds, Newtons, etc.) This shall include:

- a. Basic rocket information, including number of stages, vehicle length, airframe diameter, number of fins, fin semi-span, fin tip and root chord, fin thickness, vehicle weight, propellant weight, empty motor case/structure weight, payload weight, liftoff weight, center of pressure and center of gravity.
- b. Propulsion information, including motor type, whether it is COTS or SRAD, COTS manufacturer and designation, motor letter classification, average thrust (N), total impulse (Ns) and motor burn time.
- c. Predicted flight data including launch rail length, liftoff thrust-weight ratio (X:1), rail departure velocity, minimum static margin, maximum acceleration (G), maximum velocity, fin flutter velocity, target, and predicted apogee.
- d. Include a flight profile graph.
- e. Recovery information, including the COTS and redundant altimeters used, drogue primary and backup deployment charges, drogue deployment altitude, drogue descent rate, main primary and backup deployment charges, main deployment altitude, main descent rate, shock cords and mechanical links.

### **2.6.2.7 PROJECT TEST REPORTS APPENDIX**

The second Project Technical Report appendix shall contain applicable Test Reports from the minimum tests prescribed in the *IREC Design, Test, & Evaluation Guide*

(<http://www.soundingrocket.org/sa-cup-documents--forms.html>). These reports shall appear in the following order. In the event any report is not applicable to the project in question, the team shall include a page marked "THIS PAGE INTENTIONALLY LEFT BLANK" in its place.

- a. Recovery System Testing: In addition to descriptions of testing performed in accordance with the DTEG sections 5.15 - 5.18 and the results thereof, teams shall include in this appendix a figure and supporting text describing the dual redundancy of recovery system electronics.
- b. SRAD Propulsion System Testing (if applicable): In addition to descriptions of testing performed and the results thereof, teams developing SRAD hybrid or liquid propulsion systems shall include in this appendix a fluid circuit diagram. This figure shall identify nominal operating pressures at various key points in the system – including the fill system.
- c. SRAD Pressure Vessel Testing (if applicable)
- d. SRAD GPS Testing (if applicable)

e. Payload Recovery System Testing (if applicable)

**2.6.2.8 HAZARD ANALYSIS APPENDIX**

The third Project Technical Report appendix shall contain a Hazard Analysis. This appendix shall address as applicable, hazardous material handling, transportation and storage procedures of propellants, and any other aspects of the design which pose potential hazards to operating personnel. A mitigation approach – by process and/or design – shall be defined for each hazard identified. An example of such a matrix is available on the ESRA website at (<http://www.soundingrocket.org/sa-cup-documents--forms.html>).

**2.6.2.9 RISK ASSESSMENT APPENDIX**

The fourth Project Technical Report appendix shall contain a Risk Assessment. This appendix shall summarize risk and reliability concepts associated with the project. All identified failure modes which pose a risk to mission success shall be recorded in a matrix, organized according to the mission phases identified by the CONOPS. A mitigation approach – by process and/or design – shall be defined for each risk identified. An example of such a matrix is available on the ESRA website at (<http://www.soundingrocket.org/sa-cup-documents--forms.html>).

**2.6.2.10 ASSEMBLY, PREFLIGHT, LAUNCH, RECOVERY, AND OFF-NOMINAL CHECKLISTS APPENDIX**

The fifth Project Technical Report appendix shall contain Assembly, Preflight, Launch, and Recovery Checklists. This appendix shall include a detailed step by step checklist procedure for final assembly, arming, launch, and recovery operations. Furthermore, these checklists shall include alternate process flows for dis-arming/safeing the system based on identified failure modes (e.g., off-nominal situations). These off-nominal checklist procedures shall not conflict with the *IREC Range Standard Operating Procedures*. Teams developing SRAD hybrid or liquid propulsion systems shall also include in this appendix a description of processes and procedures used for fill and vent procedures (including fault procedures) along with procedures for cleaning all propellant tanks and other fluid circuit components.

Competition officials will verify teams are following their checklists during all operations – including assembly, preflight, launch, and recovery operations. Therefore, teams shall maintain a complete, paper hardcopy of these checklist procedures with their flight hardware during all range activities. Insufficient detail, failure to bring paper hard copies, and failure to use your team's detailed checklist will make your team ineligible for flight activities until conflicts are resolved.

**2.6.2.11 ENGINEERING DRAWINGS APPENDIX**

The sixth Project Technical Report appendix shall contain detailed Engineering Drawings. This appendix shall include any revision controlled technical drawings necessary to define significant subsystems and components SRAD subsystems or components shall have their own respective

detailed Engineering Drawings that are rolled up into the top level assembly. To reduce file size, please do not embed full CAD models – just use a picture.

### 2.6.3 POSTER SESSION MATERIALS

Each team shall bring to the Spaceport America Cup a poster display which overviews their project for industry representatives, the general public, other students, and members of the judging panel. The information provided should encompass the overall project's design, testing, CONOPS, and purpose. The poster shall measure approximately 36 inches × 48 inches and must be self-supporting on either an organizer provided table or team provided easel. No partitions or other structures for hanging posters will be provided. Finally, the poster shall prominently display the team's Team ID in the top, right corner, in bold, black, size 72 or larger, Arial font (or similar), on a white field.

These displays – as well as any practicable non-energetic project hardware – will be exhibited in a Poster Session held during the SA Cup Conference. One or more team members are expected to remain with the display throughout the day to answer questions and present their work to industry representatives, the general public, other students, and competition officials. All teams will participate in the Poster Session, regardless of whether or not they are additionally selected to participate in the Podium Session described in Section 2.6.4 of this document.

On the specified date per the SA Cup Integrated Master Schedule Document, teams shall submit a digital, PDF copy of their poster display to the Spaceport America Cup Hero<sup>X</sup> website (<https://www.herox.com/SpaceportAmericaCup2024>). The event organizers will post these files in an online archive of the conference proceedings. The submission location and method for the Poster Session Materials is to be determined and will be communicated to the teams on HeroX.

**Note: All energetics including, but not limited to: initiators, fuel grains, ejection charges, and pressurized gas cylinders, are prohibited from entering the conference premises. Failure to follow this policy will incur a point penalty and possible disqualification.**

### 2.6.4 PODIUM SESSION MATERIALS

Each team shall submit an Extended Abstract on a particular aspect of their work for competition officials and the judging panel to consider including in a Podium Session held during the SA Cup Conference. Teams whose topics are accepted into the Podium Session will be considered eligible for Technical Achievement Awards defined in Section 2.7.3 of this document. The Extended Abstract shall be formatted according to the style guide of the American Institute of Aeronautics and Astronautics (AIAA), using the provided Microsoft® Word document template.

The *Intercollegiate Rocket Engineering Competition Extended Abstract* template is available for download on the ESRA website (<http://www.soundingrocket.org/sa-cup-documents--forms.html>). Always check the template maintained on the ESRA website before drafting your Extended Abstract to ensure you are using the latest version.

The Extended Abstract's main title is left to the team's discretion, however; the document shall be subtitled "Team Your Team ID Technical Presentation to the Year Spaceport America Cup". For example, a team assigned the Team ID "42", competing in the 2024 IREC, would subtitle their Extended Abstract "Team 42 Technical Presentation to the 2024 Spaceport America Cup".

The Extended Abstract shall be no less than 500 words long and shall not exceed two pages, not including footnotes, sources, or source endnotes. The Extended abstract should not contain any tables, figures, nomenclature lists, equations, appendices etc. The submission must include sufficient detail to demonstrate its purpose, the technical foundation for the topic discussed, any preliminary results to date, and the expected results of flight testing at the Spaceport America Cup.

The topic a team selects for their Podium Session submission should be an aspect of their launch vehicle development which they are particularly proud of, excited about, learned the most in the process of, creates new knowledge, advances the field's understanding of a particular area, presented a unique technical challenge they overcame, and/or otherwise best demonstrates the team's technical excellence and/or innovation in a particular aspect of their work. Note that podium sessions are limited to launch vehicle-related items (payloads are not eligible). A few examples of student work from past IRECs which would have made strong Podium Session submissions include the following. (This list is intended to be thought provoking only and is in no way intended to be either comprehensive, exclusive, or otherwise limiting.)

- Design, analysis, and testing of additively manufactured plastic fins for transonic and supersonic flight.
- Design, analysis, and testing of grid-fins
- Design, analysis, and testing of plasma based electrodynamic roll control actuators.
- Rigorous internal ballistics analysis of a large SRAD solid rocket propulsion system
- Design, analysis, and testing of a drag reducing aerospike equipped nosecone.
- Rigorous verification & validation testing of a SRAD ignition system for simultaneous activation of parallel rocket stages comprising multiple combustion cycles
- Design, analysis, and flight demonstration of automated, active telemetry transmitter tracking by a steerable, ground-based antenna.
- Rigorous verification & validation testing of a SRAD propulsion system, including propellant characterization and multiple hot fire tests
- Design, analysis, and testing of "rollerons" implemented for passive roll stability augmentation.
- Design, analysis, and testing of an additively manufactured liquid rocket engine combustion chamber.
- Design, analysis, and testing of a method to greatly minimize the amount of black powder needed to parachute ejection.
- Progress in a regimented iterative approach to developing and implementing an active stability augmentation system.

- Rigorous post-test analysis and characterization of a previously undefined hybrid rocket motor failure mode.
- Design, analysis, and testing of a regenerative cooling system.
- Structural design based on exquisite aerodynamic/aerothermal loads analysis.
- Exquisite trajectory analysis verified by flight demonstration.
- Manufacturing capabilities enabled by SRAD fiber composite filament winding technology.
- Structural analysis of fiber composite laminates using non-isentropic analytic techniques

On or before a specified IMS date prior to the event, teams shall submit a digital, PDF copy of their Extended Abstract to the Hero<sup>X</sup> website

(<https://www.herox.com/SpaceportAmericaCup2024>). The event organizers will post these files in an online archive of the conference day proceedings. The submission location and method for the Extended Abstract is to be determined and will be communicated to the teams.

At the same time they submit their Extended Abstract, teams shall also submit a digital, PDF copy of any slides they wish to use in their presentation to the Hero<sup>X</sup> website. The event organizers will post these files in an online archive of the conference proceedings. The submission location and method for the Presentation Slides is to be determined and will be communicated to the teams.

No less than 24 teams will be accepted into the Podium Session. Each presentation will be allotted 20 minutes, with an additional five minutes reserved for Q&A with judges and other audience members. Whether accepted into the Podium Session or not, all attending teams should be prepared to participate in this activity. On the conference day itself, competition officials may ask teams whose Extended Abstracts were considered "runners up" to take the place of any selected teams who fail to attend the Spaceport America Cup.

## **2.6.5 INTEGRATED MASTER SCHEDULE MILESTONES**

Each team is required to meet the timelines in the Spaceport America Cup Integrated Master Schedule. Failure to meet required timelines will result in either a point penalty outlined in section 2.6 and 2.7 of this document or may prevent teams from flying. The Integrated Master Schedule Document can be downloaded from the ESRA website (<http://www.soundingrocket.org/sa-cup-documents--forms.html>).

## **2.6.6 ADMINISTRATIVE DOCUMENTS**

### **2.6.6.1 SCHOOL PARTICIPATION LETTER**

Each team shall have the academic institution(s) in which its members are enrolled provide a signed letter to ESRA, acknowledging the team's participation in the IREC at the Spaceport America Cup. The signature shall be that of a faculty member or other paid, non-student staff representative. This will affirm the team in question does in fact represent the academic institution(s) its members claim affiliation with.

An example Spaceport America Cup School Participation Letter is available for download on the ESRA website (<http://www.soundingrocket.org/sa-cup-documents--forms.html>).

On or before a specified date prior to the event, teams shall submit digital, PDF copy(s) of their signed school participation letter(s) to the Hero<sup>X</sup> website. For example, a team from Starfleet Academy would submit the digital copy of their signed school participation letter. Similarly, if this same team were formed jointly by students from Starfleet Academy and the Vulcan Science Academy, they would submit two files.

### **2.6.6.2 INSURANCE**

The event's insurance policy provides liability coverage for ESRA, NMSA, and the state of New Mexico. This liability coverage does not apply to the student team or the individual students. All student teams are required to obtain and provide proof of insurance coverage by the third progress report for all attending members prior to attending the Spaceport America Cup.

While some teams may choose to be covered by their college or university, there is one eligible alternative source of insurance coverage. Insurance Coverage for solid and hybrid propulsion rocket teams can be provided by Tripoli Rocketry Association ([www.tripoli.org](http://www.tripoli.org)) (i.e. 10K/30K COTS, 10K/30k SRAD solid and hybrid categories). The coverage under Tripoli Launch Insurance comes at no additional cost (except Tripoli membership fees, see below).

If your team chooses insurance coverage through Tripoli Rocketry Association all team members present at the Spaceport America Cup will be required to be registered as at a minimum as a due paying Lvl 0 Member. Membership cards will be requested at the registration desk on the first day of events. All teams flying under Tripoli Launch insurance shall comply with the guidance in the DTEG, section 3.

Liquid category flights are **NOT COVERED** by Tripoli Launch Insurance. These teams are required to provide their own insurance coverage and to provide documentation of coverage by the 3<sup>rd</sup> progress report. The required documentation is written proof, in English, of comprehensive general liability insurance, including advertising liability and premises liability, of no less than \$1,000,000 US Dollars. Note: individual, personal, or travel insurance policies do not qualify under this position. Teams without documented insurance coverage will not be allowed to fly. ESRA is not responsible for and cannot assist in finding suitable insurance policies.

Details for the Tripoli Insurance policy can be found at: <http://www.tripoli.org/Insurance>

### **2.6.6.3 SPACEPORT AMERICA CUP WAIVER AND RELEASE OF LIABILITY**

Every individual attending the Spaceport America Cup – including team members, faculty advisers, and others – shall digitally sign the *Spaceport America Cup Waiver and Release of Liability Form*. Individuals who do not sign this form will be unable to participate in any activities occurring on NMSA property (i.e., Spaceport America).

The *Spaceport America Cup Waiver and Release of Liability Form* is available for digital signature and can be found on <https://www.spaceportamericacup.com/>

## **2.7 AWARDS AND SCORING**

### **2.7.1 CATEGORY PLACE AWARDS**

A First Place Award will be granted to the highest scoring, eligible team in each of the six categories defined in Section 2.0 of this document. A Second Place Award will be granted to the second highest scoring, eligible team in each category. A team is considered eligible for the place award(s) in its category after launching successfully to at least half or more its 10,000 ft or 30,000 ft target altitude – depending on category. In the event no teams meet this definition in a given category, competition officials may issue Category Place Awards at their discretion based on multiple factors – including points accrued, launches attempted, and flight performance.

Teams are permitted to switch categories as necessary prior to submitting their final Project Technical Report. For example, if an SRAD propulsion system project encounters insurmountable difficulties at any point during the academic year, the student team is free to defer work on the SRAD system and opt for a near-term COTS solution without dropping out of the competition; however, each team's project will be entered into only one competition category. For example, a single team may not compete in two categories in the same year by flying once using a COTS motor, then again using an SRAD motor. In the event such a possibility exists for any team, the organizers highly encourage that team to compete in an SRAD rather than a COTS category.

Competition officials will award points based on their evaluation of each team's required documentation (including the Entry Form, Progress Updates, and Project Technical Report), design implementation (observed through the team's poster display and a day in the field spent preparing for launch) and demonstrated flight performance (including reported altitude and successful recovery).

#### **2.7.1.1 SCORING ENTRY FORM AND PROGRESS UPDATE DELIVERIES**

The correct, complete, and timely delivery of a team's Entry Form and subsequent Progress Updates is awarded as many as 60 points – 6% of 1,000 total points possible. The Entry Form and subsequent updates are considered correct if they are submitted as specified in Section 2.6.1 of this Document. They will be considered complete if they are filled out in accordance with the online form on HeroX. They will be considered timely if they are received by the deadline specified in the *Spaceport America Cup Integrated Master Schedule Document*.

The 60 points are divided evenly among the four submissions (i.e. the Entry Form and three subsequent Project Updates), making each submission worth 15 points. The submission is awarded these points on a pass/fail basis and must meet all three criteria – correctness, completeness, and timeliness – in order to “pass.” Teams are highly recommended to submit their reports several days before the deadline to ensure there are no technical issues. There is no 72-hour GRACE PERIOD

for submissions. Teams missing the deadline are still required to make that submission as soon as possible for administrative purposes – unless that team no longer plans to attend the Spaceport America Cup. If the team no longer plans to attend the Spaceport America Cup, they must follow the procedure for withdrawing from the competition per Section 2.9 of this document.

### **2.7.1.2 SCORING PROJECT TECHNICAL REPORT**

Timely Project Technical Reports will be awarded as many as 200 points – 20% of 1,000 points possible – for their correctness, completeness, and analysis. Only timely Project Technical Reports will be evaluated and scored. A Project Technical Report is considered timely if it is received before the deadline specified in the *Spaceport America Cup Integrated Master Schedule Document*. Teams are highly recommended to submit their report several days before the deadline to ensure there are no technical issues. There is no 72-hour GRACE PERIOD for submissions. Although they will not receive points for the submission, teams which miss the submission window are still required to make that submission as soon as possible for administrative purposes – unless that team no longer plans to attend the Spaceport America Cup. If the team no longer plans to attend the Spaceport America Cup, they must follow the procedure for withdrawing from the competition per Section 2.9 of this document.

**Correctness** is worth 20% (40 points) of the Project Technical Report's overall point value. Correctness is defined by its adherence to the format/style guide specified in Section 2.6.2 of this document and upholding of basic technical editing standards. The report's correctness will be rated using the Technical Report Rubric in Appendix B.

**Completeness** is worth 10% (20 points) of the Project Technical Report's overall point value. The Project Technical Report is considered complete if it contains all minimally required content defined in Section 2.6.2 of this document. Points for completeness are awarded on a pass/fail basis, and only minor omissions or ambiguity of required information is tolerated in a passing evaluation.

**Analysis** is worth 70% (140 points) of the Project Technical Report's overall point value. This constitutes a structured, qualitative assessment by the evaluating competition officials of the analytic rigor demonstrated by the team during the iterative down-selection, refinement, and acceptance of all project aspects. The report's analysis will be rated using the Technical Report Rubric in Appendix B. Teams should note this score may be amended at the Spaceport America Cup itself, based on the evaluators' assessment of the team's conceptual understanding during any interactions.

### **2.7.1.3 SCORING DESIGN AND IMPLEMENTATION**

Teams will be awarded as many as 240 points – 24% of 1,000 points possible – for the overall design quality, strategic design decisions, and build quality exhibited by their work. Competition officials will evaluate these criteria through interactions with the teams and their systems, occurring throughout the SA Cup Conference Poster Session and all during the following day – spent making launch preparations in the field.

**Design quality** is worth 50% (120 points) of the overall value assigned to Design and Implementation. This constitutes a structured, qualitative assessment by the competition officials of the team's relative competency in the physical principles governing their design (e.g., Did the team demonstrate they know what they're doing by designing something likely to work with a greater or lesser degree of success – provided it is sufficiently well constructed?). This also evaluates the team's due diligence in deciding how best to implement their design – in keeping with a strategic vision they can articulate clearly. In general, teams should set strategic goals for their project which extend beyond simply excelling in a particular category. ESRA places special significance on projects which leverage SRAD in a particular aspect, either to enhance the team's understanding of that subject, or to develop technology necessary for achieving a longer-term performance goal. The project's design quality and strategic design decisions will be rated using the Design Implementation Rubric in Appendix B.

**Build quality** is worth 50% (120 points) of the overall value assigned to Design and Implementation. This constitutes a structured qualitative assessment by the competition officials of the team's quality with which that design was constructed (e.g., Is the finished product sufficiently well-constructed to meet the needs of the underlying design and reasonably expected variation in launch conditions). The project's build quality will be rated using the Design Implementation Rubric in Appendix B.

#### 2.7.1.4 SCORING FLIGHT PERFORMANCE

Teams will be awarded as many as 500 points – 50% of 1,000 points possible – for their project's flight performance during launches at the Spaceport America Cup, demonstrated by altitude achieved relative to the target apogee and successful recovery.

The accuracy of the launch vehicle's actual apogee achieved relative to the target apogee is worth 70% (350 points) of the overall value assigned to flight performance. Precise Trajectory planning is important. Points will be awarded for apogees within  $\pm 30\%$  of the 10,000 ft AGL or 30,000 ft target apogee according to the following formula.

$$Points = 350 - \left( \frac{350}{0.3 \times Apogee_{Target}} \right) \times |Apogee_{Target} - Apogee_{Actual}|$$

*where Apogee<sub>Target</sub> may equal either 10,000 ft AGL or 30,000 ft AGL*

Teams shall report in person to Post Flight Data Recovery officials immediately after recovery of their rocket to report the official altitude in accordance with section 2.5 of this document.

If telemetry data from the COTS altitude logging system is not immediately available, teams may report the apogee revealed in this telemetry to competition officials if and when a confirmation of nominal ascent and recovery system deployment events is possible. This information will be used

for scoring only in the event the launch vehicle is not recovered prior to the end of eligible launch operations on the final scheduled launch day.

The successful recovery of the launch vehicle is worth 30% (150 points) of the overall value assigned to flight performance. A recovery operation is considered successful if it does not result in excessive damage to the launch vehicle. Excessive damage is defined as any damage to the point that, if the systems intended consumables (e.g., propellants, pressurized gases, energetic devices) were replenished, it could not be launched again safely. At competition officials' discretion, replacement of damaged fins or other airframe components specifically designed for easy, rapid replacement is allowed if such components are on hand and can reasonably be replaced within 30 minutes. Post Flight Data Recovery officials will visually inspect the launch vehicle upon its return to the designated basecamp area and award these points on a pass/fail basis.

#### **2.7.1.5 PENALTIES FOR UNSAFE OR UNSPORTSMAN LIKE CONDUCT**

Teams will be penalized 20 points off their total earned score for every instance of unsafe or unsportsmanlike conduct recorded by competition officials (e.g., judges, volunteers, or staff members). Unsafe conduct includes, but is not limited to, violating the *IREC Range Standard Operating Procedures*, failure to use checklists during operations, violating NMSA motor vehicle traffic safety rules, and failure to use appropriate personal protective equipment. Unsportsmanlike conduct includes, but is not limited to, hostility shown towards any Spaceport America Cup Participant, intentional misrepresentation of facts to any competition official, and intentional failure to comply with any reasonable instruction given by a competition official.

#### **2.7.1.6 PENALTIES FOR VIOLATING PAYLOAD REQUIREMENTS**

Teams will be penalized 100 points off their total earned score for each of the five payload requirements described in Section 2.2.3 of this document in spirit or intent. These include Mass, Independent Function, Location & Interface, Restricted Materials, and Form Factor. With regards to mass, due to the allowance made for differences in measuring devices, teams will not be permitted to modify their payloads with additional mass to avoid penalty at the event.

#### **2.7.1.7 BONUSES FOR PAYLOAD CUBE UNIT BASED PAYLOADS**

Teams whose payload(s) qualify for the form factor exemption described in Section 2.3.5.2 of this document, yet still adopt the Payload Cube Unit form factor, will be awarded 50 bonus points in addition to their total earned score. This promotes ESRA's encouragement that teams adopt the Payload Cube Unit for their payload(s) whenever possible – either as the payload structure itself, or as an adapter which the payload is mated to prior to the combined assembly's integration with the launch vehicle (such an adapter could be included in the official payload mass).

### **2.7.1.8 BONUSES FOR EFFICIENT LAUNCH PREPARATIONS**

Teams whose preparedness, efficient operations, and hassle-free design permit their being launched in a timely manner will be awarded bonus points in addition to their total earned score according to the following tiered system. Launch readiness is declared when competition officials managing Launch Control receive the team's completed Flight Card. No bonus points will be awarded for launch attempts resulting in catastrophic failures or weather delays/cancellations.

- 50 bonus points will be awarded to teams who launch on Wednesday.
- 25 bonus points will be awarded to teams who launch on Thursday.
- 0 bonus points will be awarded to teams who launch on Friday or Saturday.

### **2.7.2 JUDGES CHOICE AND OVERALL WINNER AWARD**

One team among the First Place Award winners in the six categories defined in Section 2.0 of this document will be named the overall winner of the Spaceport America Cup: Intercollegiate Rocket Engineering Competition and will receive their own Genesis Cup trophy! A perpetual trophy rendition of the Genesis Cup is displayed in the Gateway Gallery at Spaceport America. The recipient of this prestigious award is determined by quantitative and qualitative assessments of the competition officials made throughout the entire event.

### **2.7.3 TECHNICAL ACHIEVEMENT AWARDS**

ESRA presents four awards recognizing technical achievement to deserving teams competing in the IREC. Three of these are awarded based on the competition officials' qualitative assessments made during the Podium Session held during the SA Cup Conference, and interactions the following day – spent making launch preparations in the field. The final award is awarded to any IREC team based on flight performance.

#### **2.7.3.1 JIM FURFARO AWARD FOR TECHNICAL EXCELLENCE**

The Jim Furfaro Award for Technical Excellence recognizes a team which demonstrates exceptional overall engineering discipline and technical skill through their analyses and conclusions, project or program planning and execution, operational procedure, manufacturing processes, iterative improvement, systems engineering methodology, robust design, etc. A team is considered eligible for the Jim Furfaro Award if they are accepted into – and participate in – the Podium Session held during the conference day at the Spaceport America Cup. Deference is given to eligible teams which complete at least one launch attempt at the Spaceport America Cup. A launch attempt is minimally defined as an attempted ignition of the launch vehicle propulsion system with the intent of executing the launch vehicle's designed mission CONOPS.

### **2.7.3.2 DR. GIL MOORE AWARD FOR INNOVATION**

The Dr. Gil Moore Award for Innovation recognizes a team whose project includes one or more features (including analytic or operational processes as well as components or assemblies) the judging panel finds genuinely "novel", "inventive", or solving a unique problem identified by the team. A team is considered eligible for the Dr. Gil Moore Award if they are accepted into – and participate in – the Podium Session held during the conference day at the Spaceport America Cup. Deference is given to eligible teams which complete at least one launch attempt at the Spaceport America Cup. A launch attempt is minimally defined as an attempted ignition of the launch vehicle propulsion system with the intent of executing the launch vehicle's designed mission CONOPS.

### **2.7.3.3 CHARLES HOULT AWARD FOR MODELING & SIMULATION**

The Charles Hoult Award for Modeling & Simulation recognizes a team demonstrating excellence in math modeling and computational analyses. A team is considered eligible for the Charles Hoult Award if they are accepted into – and participate in – the Podium Session held during the conference day at the Spaceport America Cup. Deference is given to eligible teams which complete at least one launch attempt at the Spaceport America Cup. A launch attempt is minimally defined as an attempted ignition of the launch vehicle propulsion system with the intent of executing the launch vehicle's designed mission CONOPS.

### **2.7.3.4 JAMES BARROWMAN AWARD FOR FLIGHT DYNAMICS**

The James Barrowman Award for Flight Dynamics recognizes a team demonstrating exquisite trajectory analysis. This will be evaluated by comparing the percent error between each team's actual and predicted apogee – the predicted apogee being a value declared prior to launch, based on a team's trajectory analysis. The award is given to the team with the smallest percent error. All teams with successful launch attempts that provide apogee data will be eligible for this award.

## **2.7.4 TEAM CONDUCT AWARDS**

ESRA presents two awards recognizing teams competing in the IREC whose conduct throughout the Spaceport America Cup exemplifies the goals and ideals of the event organizers. The Spaceport America Cup should be an event where academia, industry, and the public may come together to preserve, popularize, and advance the science of rocketry in a collaborative environment energized by friendly competition.

### **2.7.4.1 TEAM SPORTSMANSHIP AWARD**

The Team Sportsmanship Award recognizes a team which goes above and beyond to assist their fellow teams and the event organizers assure the Spaceport America Cup: Intercollegiate Rocket Engineering Competition is a productive, safe, and enjoyable experience for all involved. They may do this in many ways, such as making themselves available to lend-a-hand whenever and however they can (whether they are asked to or not), being positive role models for their fellow teams, and generally being a "force for good" in every activity in which they involve themselves.

A team is considered eligible for the Team Sportsmanship Award by being present at the Spaceport America Cup. Teams may earn Sportsmanship points throughout the event by following these guidelines outlined in this section. Any Sportsmanship points are awarded at the discretion of competition officials.

#### **2.7.4.2 NANCY SQUIRES TEAM SPIRIT AWARD**

The Team Spirit Award recognizes a team which arrives at the Spaceport America Cup with proverbial (or literal) smiles on their face, a school flag in their hand, and never lets either waver throughout the event. They show great pride in their work, learn from their mistakes, remain positive when things don't go their way, engage members of the general public with respect and enthusiasm, and show respect for invited guests by attending and participating guest speaker presentations whenever possible. A team is considered eligible for the Team Sportsmanship Award by being present at the Spaceport America Cup.

#### **2.7.4.3 TEAM VIDEO CHALLENGE AWARDS**

The team video challenge award recognizes teams who do an exceptional job of communicating their team's culture, excitement, and achievements in video form. Teams use a combination of pre-prepared footage and launch footage to assemble their submission. The winner is chosen based on their narrative and production quality. All entries are eligible to be played throughout the awards ceremony. The submission method and deadline are outlined in the IMS.

#### **2.7.4.4 LIVE ROCKET VIDEO CHALLENGE AWARDS**

The live rocket video challenge recognizes teams who accept the technical challenge of providing live streamed video from rocket cameras or rocket telemetry. These teams provided never-before-seen views to showcase new aspects of rocket launches. The winner is chosen based on their technical and communication effectiveness. All entries are eligible to be played throughout the awards ceremony and on the livestream. The submission method and deadline are outlined by Section 2.6.5 of this document. The submission method and deadline are outlined in the IMS.

### **2.8 DISQUALIFICATION FROM CONSIDERATION FOR ANY AWARD**

A limited number of criteria constitute grounds for disqualification from consideration for any award. These can include a failure to meet the defining IREC mission requirements recorded in Sections 2.0 through 2.5 of this document, failure to submit a Project Technical Report or third/final progress update at any time prior to the Spaceport America Cup (or otherwise failing to provide adequate project details in required deliverables), and failure to send eligible team member representatives to the Spaceport America Cup. Finally, any Team found to have accrued 3 safety or unsportsmanlike conduct infractions at any time during the Spaceport America Cup will be disqualified. Any individual observed committing a single, severe safety or unsportsmanlike conduct infraction may be summarily removed and barred from participation in the remainder of the Spaceport America Cup.

## **2.9 WITHDRAWAL FROM COMPETITION**

Teams which decide to formally withdraw from the IREC at any time prior to the event must send an e-mail entitled "TEAM <Your Team ID> FORMALLY WITHDRAWS FROM THE Competition Year IREC" to [general.info@esrarocket.org](mailto:general.info@esrarocket.org). For example, a team assigned the Team ID "42" would withdraw from the 2024 IREC by sending an e-mail entitled "TEAM 42 FORMALLY WITHDRAWS FROM THE 2024 IREC" to [general.info@esrarocket.org](mailto:general.info@esrarocket.org).

### **2.9.1 APPLICATION AND PROJECT AND ROCKETEER FEE REFUNDS**

Team application Fees are non-refundable. Team Project and Rocketeer Fees are refundable until the deadline listed in the Integrated Master Schedule. Teams who are late paying any fee may have points deducted or may be removed from the competition. Fee deadlines are in the IMS and will be announced on HeroX.

## **3.0 INTERNATIONAL TRAFFIC IN ARMS REGULATIONS**

Speakers and attendees of the Spaceport America Cup are reminded that some topics discussed at conferences could be controlled by the International Traffic in Arms Regulations (ITAR). The Spaceport America Cup is an ITAR-free event. U.S. persons (e.g. U.S. citizens and permanent residents) are responsible for ensuring all submissions and presented content are free of export restrictions. U.S. persons are likewise responsible for ensuring that they do not discuss ITAR export-restricted information with non-U.S. nationals in attendance. Similarly, US person authors of IREC Project Technical Reports as well as Podium Session submissions and associated slide decks are responsible for ensuring the content of their materials does not exceed the interpretation of "fundamental research" and the ITAR established by their affiliated academic institution(s). More information in regard to ITAR can be found on ([https://www.pmdc.state.gov/ddtc\\_public](https://www.pmdc.state.gov/ddtc_public))

## APPENDIX A: ACRONYMS, ABBREVIATIONS, AND TERMS

| ACRONYMS & ABBREVIATIONS |   |
|--------------------------|---|
| <b>AGL</b>               | Above Ground Level                                    |
| <b>AIAA</b>              | American Institute of Aeronautics and Astronautics    |
| <b>APCP</b>              | Ammonium Perchlorate Composite Propellant             |
| <b>APRS</b>              | Automatic Packet Reporting System                     |
| <b>CFR</b>               | Code of Federal Regulations                           |
| <b>CONOPS</b>            | Concept of Operations                                 |
| <b>COTS</b>              | Commercial Off-the-Shelf                              |
| <b>ESRA</b>              | Experimental Sounding Rocket Association              |
| <b>FAA</b>               | Federal Aviation Administration                       |

| <b>STEM</b>              | Science, Technology, Engineering, and Mathematics     |
| <b>TBD</b>               | To Be Determined                                      |
| <b>TBR</b>               | To Be Resolved  |
| <b>TRA</b>               | Tripoli Rocketry Association                          |

| <b>TERMS</b>                      |   |
|-----------------------------------|---|
| <b>Amateur Rocket</b>             | <p>14 CFR, Part 1, 1.1 defines an amateur rocket as an unmanned rocket that is "propelled by a motor, or motors having a combined total impulse of 889,600 Newton-seconds (200,000 pound-seconds) or less and cannot reach an altitude greater than 150 kilometers (93.2 statute miles) above the earth's surface".</p>   |
| <b>Excessive Damage</b>           | <p>Excessive damage is defined as any damage to the point that, if the systems intended consumables were replenished, it could not be launched again safely. Intended Consumables refers to those items which are - within reason - expected to be serviced/replaced following a nominal mission (e.g. propellants, pressurizing gasses, energetic devices), and may be extended to include replacement of damaged fins or other airframe components specifically designed for easy, rapid replacement if such components are on hand and can reasonably be replaced within 30 minutes.</p> |
| <b>FAA Class 2 Amateur Rocket</b> | <p>14 CFR, Part 101, Subpart C, 101.22 defines a Class 2 Amateur Rocket (aka High Power Rocket) as "an amateur rocket other than a model rocket that is propelled by a motor or motors having a combined total impulse of 40,960 Newton-seconds (9,208 pound-seconds) or less."</p>   |
| <b>Non-toxic Propellants</b>      | <p>For the purposes of the Spaceport America Cup: IREC, the event organizers consider ammonium perchlorate composite propellant (APCP), potassium nitrate and sugar (aka "rocket candy"), nitrous oxide, liquid oxygen (LOX), hydrogen peroxide, kerosene, propane, and similar, as non-toxic propellants. Toxic propellants are defined as requiring breathing apparatus, special storage and transport infrastructure, extensive personal protective equipment, etc.</p>  |

## APPENDIX B: JUDGING RUBRICS

|                              | <b>Technical Report Rubric</b>   |  |   |  |       |
|------------------------------|--|--|---|--|-------|
| Criteria                     | Ratings  |  |   |  |       |
|                              | Outstanding  | Excellent  | Satisfactory  | Unsatisfactory   | Score |
| Completeness<br>(20 pts)     | 20 pts<br><br>All required items present   | Pass/fail only   | Pass/fail only  | 0 pts<br><br>One or more required items missing  | /20   |
| Style and Format<br>(40 pts) | 36-40 pts  | 30-35 pts  | 20-29 pts   | < 20 pts   |       |
| Style<br>(20 pts)            | 18-20 pts<br><br>Writing was exceptionally clear, understandable, and concise.<br>Sentence and paragraph organization is exceptional.<br>Writing is free of digressions or irrelevant information. | 15-17 pts<br><br>Writing was clear, understandable, and concise.<br>Overall paragraph and sentence organization were very good.<br>Digressions or irrelevant information do not significantly detract from the report. | 10-14 pts<br><br>Writing was generally clear and understandable.<br>Paragraph and sentence organization were generally good.<br>Digressions or irrelevant information detract from the report's analysis. | <10 pts<br><br>Writing was repeatedly unclear, difficult to understand or wordy.<br>Overall paragraph and/or sentence organization were ineffective or nonexistent.<br>Digressions and/or irrelevant information consistently detract from the analysis. | /20   |
| Mechanics<br>(10 pts)        | 9-10 pts<br><br>No grammar, spelling, or mechanics errors.<br>Scientific terms correctly used, units and dimensions consistent and correct.  | 7-8 pts<br><br>No more than a few grammar, spelling, or usage errors.<br>Only a few minor errors with use of scientific terms or dimensions.   | 5-7 pts<br><br>Significant spelling, usage, and grammar errors that did not detract from readability.<br>Significant errors with use of scientific terms or dimensions.                                   | < 5 pts<br><br>Repeated grammar or spelling errors detracted from readability.<br>Errors with use of scientific terms or dimensions detracted from report.   | /10   |
| Format<br>(10 pts)           | 9-10 pts<br><br>Completely follows required template.<br>Meets page limits.  | 7-8 pts<br><br>Minor deviations from required template.<br>Meets page limits.  | 5-7 pts<br><br>Major deviations from required template.<br>< 10% over page limits.  | <5 pts<br><br>No attempt at cohesive format or use of required template.<br>More than 10% over page limits.  | /10   |
| Style and Format<br>Total    | Total  |  |   |  | /40   |
| Analysis<br>(140 pts)        | 126-140 pts  | 105-125 pts  | 70-104 pts  | < 70 pts   |       |

|   |   |   |   |   |      |
|---|---|---|---|---|------|
| Depth of Analysis (50 pts)                    | 45-50 pts<br>Very complete and thorough analysis. All key design decisions are discussed and based on design targets, constraints, and appropriate tradeoffs.                                       | 38-45 pts<br>Adequate analysis with minor weaknesses. Most key design decisions are discussed and based on design targets, constraints, and appropriate tradeoffs.                              | 25-37 pts<br>Adequate analysis with significant gaps or weaknesses. Some key design decisions are discussed and based on design targets, constraints, and appropriate tradeoffs. Some minor incorrect statements. | < 25 pts<br>Inadequate analysis. Few, if any key design decisions were discussed. No discussion of tradeoffs. Parts of analysis conflict with general scientific knowledge. | /50  |
| Assumptions and Sensitivity Analysis (30 pts) | 27-30 pts<br>All assumptions are clearly stated. Sensitivity analysis is performed to quantify uncertainty in variables and assumptions.  | 23-26 pts<br>Most assumptions were addressed. Some sensitivity analysis.  | 15-22 pts<br>Unstated assumptions. No sensitivity analysis.   | <15 pts<br>No stated assumptions or assumptions were unreasonable. No sensitivity analysis.   | /30  |
| Verification and Validation tests (40 pts)    | 36-40 pts<br>All verification and validation tests were discussed, both for the final design and key iterations leading to that design. Complete and valid conclusions were drawn from the results. | 30-35 pts<br>Most verification and validation tests are adequately discussed. Appropriate conclusions were drawn from the results, but key iterations prior to final design were not discussed. | 20-29 pts<br>Some verification and validation tests are discussed but inconsistent. Unclear that conclusions and decisions were drawn from testing results and analysis.  | < 20 pts<br>Unclear whether verification and validation tests were performed. Decisions and conclusions were not drawn from the analysis.                                   | /40  |
| Use of Charts and Figures (20 pts)            | 18-20 pts<br>Tables, figures, and appendices all effectively organize and communicate information.  | 15-17 pts<br>Use of tables, figures, and appendices is mostly effective.  | 10-14 pts<br>Use of tables, figures, and appendices is somewhat effective with significant issues.  | < 10 pts<br>Tables, figures, and appendices were incorrect or misleading.   | /20  |
| Analysis Total (140)                          | Total   |   |   |   | /140 |

|  |  |  |  |  |      |

## Podium Session Rubric

**Note:** Judges should also review the Project Technical Report for additional detail, but the award must be based on the material covered in the Podium Session (e.g., if the Podium Session does not cover Modeling & Simulation, then the team is not eligible for the Hoult Award even if that is covered in the Technical Report).  
**Note 2:** The rubric will be used as a guide to focus the discussion during the Judges’ scoring deliberations and isn’t the final word.

| Rating Area                                    | Rating Criteria   | Specific Highlight | Award | Score: |
|--|---|--------------------|-------|--------|
| <b>Technical Excellence (Furfaro Award)</b>    | Overall engineering discipline and technical skill through analyses and conclusions, project or program planning and execution, operational procedure, manufacturing processes, iterative improvement, systems engineering methodology, robust design, etc. |                    | (Y/N) | (0-30) |
| <b>Innovation (Moore Award)</b>                | Project includes one or more features (including analytic or operational processes as well as components or assemblies) the judging panel finds genuinely "novel," "inventive," or solves a unique problem identified by the team.                          |                    | (Y/N) | (0-30) |
| <b>Modeling &amp; Simulation (Hoult Award)</b> | Mathematical modeling and computational analyses.   |                    | (Y/N) | (0-30) |
| <b>Presentation Quality</b>                    | Slides are professional and easy to read. Graphics add value and are not misleading. Presenter is easy to understand and did not just read the slides. Good responses to audience questions.  |                    |       | (0-10) |
